

Pittsburgh Lock Seam Pistol Grip

The Pittsburgh Lock Seam Superior Air Hammer can cut your finishing time up to 80%. It can be used to fold over or "seam" metal to 22 gauge and lighter on general fabricating, run Pittsburgh Lock Seams on ductwork, tubes, doors, panels, etc. The finished seam is neater and more uniform than seams hammered by hand. Fabricating plants using the adapters claim that one operator's production equals that of eight hand-hammering workmen.
