

TRUMPF Seam Locker F 301

Lock Fast and Hold Tight

The Pittsburgh seam is the ideal seam joint on straight or bent ducts made of pre-formed pinned together border profiles. Aesthetically pleasing and solid fittings are produced without having to use additional fitting elements.

The seam locker F 300 i.e. F 301 will lock Pittsburgh seams by a self acting almost silent roll / sliding process without damaging the surfaces or metal coatings. The integral feed ensures constant seam accuracy and high quality of the seam lock.

Further details of the seam locker F 301-2:

- Adjusts automatically to sheet thickness
- Operation independent of edge length
- No refitting when processing formed or folded pieces
- Consistent seam quality with automatic feed system
- F 301-2 can be used from edge height of 7.5mm

Sheet thickness Steel 400 N / mm ² min. Steel 400 N / mm ² max.	0.45 mm 1 mm
Working speed	4-6 m/min.
Smallest radius	150 mm inner radius 300 mm outer radius
Weight	5.2 kg
