

Work With Solutions, Not Problems

Work With Ductmate 45[®]

Roll-Formed Flange

No time consuming fabrication is needed with DM45. Our flange is manufactured from 18 Gauge steel, has an integral mastic, and can accept duct walls as heavy as 10 Gauge. DM45 requires no drilling, welding, rust proofing, or external sealing, and is good to 10" positive and negative W.G.

Bolt-On and Snap-On Cleats

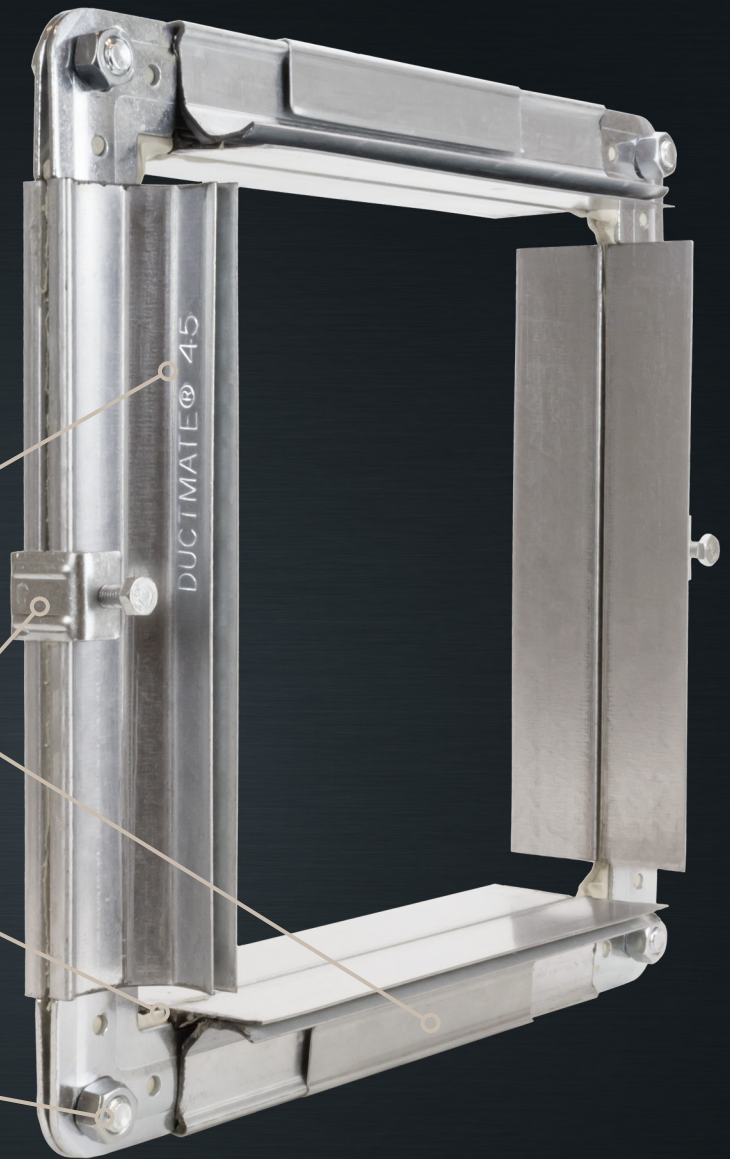

The unique Ductmate "Bolt-On" Cleat design completes connections quickly and easily and our alternative Snap-On Cleat is great for virtually any application, including exterior duct systems.

Ductmate 440[™] Gasket

Non-skinning, non-drying sealing gasket capable of withstanding joint movement and pressure without cracking. Our butyl gasket is the industry standard for creating a leak free duct connection.

Corners and Bolts

Stamped from 11 Gauge steel and utilizing heavy-duty 1/2" bolts, our DM45 Corners are all about providing an efficient way to connect large and difficult duct systems.

Better Solutions With **DUCTMATE[®]**

Large Scale Duct Connections

Heavy duty ductwork requires heavy duty connections and the Ductmate 45 connector system provides better solutions! Equal in strength to a SMACNA K Class connection, the Ductmate 45 system is aesthetically pleasing compared to Companion Angle, installs easier, and is engineered to exceed industry standards on even the largest applications. Backed by rigorous testing and our industry leading guarantee, large scale critical air systems are simply better with the Ductmate 45 system. ■
