

Cartridge Killer™

Carlisle HVAC Products' Cartridge Killer™ provides applicators with a quick, simple way to apply a fine bead of Spray-Seal™ Duct Sealant to boots, wyes, and other fittings. Cartridge Killer helps applicators save time and money on labor and materials, and provides superior aesthetics when compared to other application methods.

Why Choose Cartridge Killer?

Precision and Consistency

Cartridge Killer allows users to apply sealant via a convenient spray pump system, providing consistent bead sizes and eliminating the need for manual caulking guns. This lightweight, hand-held extrusion gun features a forward-facing trigger that affords users excellent control over their sealant application, and the rotating swivel allows users to apply sealant from any angle without kinking or binding the spray hose. Cartridge Killer features specially designed tips that can be placed directly in the joint or seam that is being sealed, ensuring precise application of the product.

Saves Time and Materials.

Cartridge Killer comes with three different-sized tips – 0.012", 0.017", and 0.022" – so users can achieve the ideal bead size for any project, and features a stainless steel mesh filter between the gun and the tip to minimize clogging and keep work on schedule. The 5-gallon "caulking tube" allows for less change-over time and minimal waste. Carlisle HVAC Products' Cartridge Killer offers users excellent control over their sealant application, resulting in improved aesthetics, minimal product storage, and lower labor and material costs.

8" Extension improves access when sealing large pieces or inside ducts.
