

ROLLFORMER VS-150

The VS-150 is Roll Former's most versatile machine, capable of several different profiles. The VS-150 is equipped with hydraulic drive and front hydraulic scissors shear, 110 volt - 1 phase power, and 40 FPM speed. The base model produces a 1" and 1-1/2" Standing Seam profile and U-Panels, adjustable width panels of 9" - 24". The VS-150 is capable of forming 7 different profiles in total, from Snap Lock styles to true "Board and Batten" and Bermuda Roof profiles. The versatility is built into the design of the machine, but most importantly, the changeover time is as low as 15 minutes to 1 hour. Optional dies are available at any time, and a digital controller for fully automatic operation is also available and highly recommended for increased production.
